ACADEMIC PROJECTS

Job Searching Portal

- To ensure that the portal can Handle thousands of users and maintain performance at peak times, we can use a combination of technologies and strategies. we can implement measures such as user authentication, password hashing, and encryption. We can also implement access control measures to restrict access to confidential data.

Dam Regulation System

- To develop a dam regulation System that can replace the manual system and improve the management and maintenance of critical information, we can use a combination of technologies and architectures. We can use a web based front-end technology like HTML, CSS and JavaScript to build the user interface of the dam regulation system. This will allow users to view and interact with the data stored in the back-end
