## GENERAL INFORMATION

Pharmacopoeial reference : In House

Quantity to be sampled :

|                 |                |
|-----------------|----------------|
| Analysis Sample | Control sample |
| 40 g            | 80 g           |

Shelf Life : 24 Months

Storage : Store in dry place, in well closed container, away from direct heat and light.

| 01. | <b>Appearance :</b><br>Instrument: Balance<br>Take about 2 to 3 g of test sample and transferred into a clean and dry petri dish. Spread it uniformly by spatula and observe.<br>Specification: Green powder.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 02. | <b>Identification by IR:</b><br>Instrument: Balance, IR Spectrophotometer, Oven<br>Take about 1 mg of sample to be analyzed and 100 mg IR grade KBr onto piece of weighing paper. The KBr should be store in the desiccator when not in used. Transfer the sample /KBr mixture to the agate mortar. Thoroughly disperse the mixture using the spatula or spoon. The pestle is then used with a grinding motion to homogenously disperse the mixture component. Completed homogeneity takes approximately 1-2 minutes of grinding the components with the pestle. Prepare a KBr pellet using an appropriate apparatus (Press Kit, E- Z press etc.) carefully examine the pallet film to ensure that it is intact and somewhat transparent. Run the pallet on suitable spectrophotometer from 4000 $\text{cm}^{-1}$ to 650 $\text{cm}^{-1}$ according to the operating instruments. All peak should be match the reference with relation to wavelength location and approximate magnitude location. Overlap the sample spectra with reference spectra.<br>Note: Sample and KBr to be dried at 105°C for about 30 minutes before use<br>Or<br>By ATR Accessory: |

|                                                | <p>Make sure the crystal is free from any residue by wiping clean with IPA or methanol and delicate wipe. Perform the background measurement. Grind a small amount of sample using agate mortar. Transfer enough of the undiluted sample to completely cover the crystal. Lower the ATR press all the way down with sufficient pressure to ensure a well-defined scan. Collect a spectrum of sample from 4000 cm<sup>-1</sup> to 650 cm<sup>-1</sup>.</p> <p>All peak should be match the reference with relation to wavelength location and approximate magnitude location. Overlap the sample spectra with reference spectra.</p> <p>Specification: IR spectrum of test sample should be concordant with the IR spectrum of standard.</p>                                                                                                                                                                                                                   |
| <b>03. Colour Shade :</b>                      | <p>Compare the colour shade of tablets coated with sample, visually with reference standard tablets.</p> <p>Specification: Colour shade should match visually with standard.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>04. Particle Size (Done on wet slurry):</b> | <p>Instrument: Balance, Stirrer, Oven</p> <p>Prepare about 5% dispersion (5 g in 95 g ± 1 g of distilled water) and stir the dispersion for about 45 minutes with constant stirring. Pour this dispersion on the top of the 100 mesh tarred mesh in a form of fine stream.</p> <p>Sieve the remaining particles on the mesh without applying any pressure with the help of running water. Continue the wet sieving process until the emerging liquid appears free of particles.</p> <p>Remove the mesh and dry it at 105°C. Allow the mesh to come to room temperature in a desiccator before weighing. Repeat the operation until two successive weighing do not differ by more than 1 mg. Determine the weight of dried material on the mesh.</p> <p>Calculation:</p> $\text{Percentage w/w passed through 100 mesh} = \frac{100 \times W1 - W5}{W1}$ <p>Where,</p> <p>W1 = Weight of sample in g taken for mesh test.</p> <p>W2 = Weight of empty mesh</p> |

Allow the silica crucible to come to room temperature in a desiccator before weighing. Repeat the operation until two successive weighing do not differ by more than 0.5 mg.</p> <p>Calculation: <math>\% \text{ Ash} = \frac{(W4-W1)}{(W2-W1)} \times 100</math></p> <p>Where, W1 = Weight of the empty crucible (g)</p> <p>W2 = Weight of the crucible with test sample before ignition (g)</p> <p>W3 = Weight of the crucible with residue after ignition (g)</p> <p>W4= Weight of the crucible with residue after ignition (g) (Constant weight)</p> <p>Specification: Not more than 40 % w/w.</p> |
